

Project Reference – Remote Water Treatment Services

Ausco Modular operate on a national footprint as a D&C Contractor for both temporary and permanent accommodation solutions. Whilst we have delivered projects across a broad range of industries we operate most heavily in the Construction and Mining Accommodation sectors.

We work with specialist industry partners to deliver turnkey solutions for our clients – which include Potable Water and Wastewater Treatment solutions required for each specific location and site-specific requirement.

One of our key industry partners in the Water and Wastewater Treatment Sector is Remote Water Treatment Services – specialising in delivering robust and reliable solutions for almost any application for Potable Water, Sewage and Wastewater as well as Industrial water treatment applications.

Ausco, with the support of Remote Water Treatment Services have completed many projects nationally within Australia that have required water and wastewater treatment solutions as a component of the overall project – with Remote Water Treatment Services providing reliable solutions with outcomes that have met expectations or exceeded them on dozens of projects.

In the Northern Territory – Remote Water Treatment Services successfully supported Ausco Modular with projects such as the Phillip Creek Compressor Station Project at Tennent Creek and the Origin Energy Beetaloo project with both Potable Water Treatment and Sewage Treatment Solutions for the construction and accommodation facilities for these sites.

Remote Water Treatment Services have also completed projects with Ausco Modular in Western Australia, South Australia, and Queensland for numerous well known industry clients – both temporary and permanent in nature.

From initial site assessment, design and costing through to regulatory and environmental compliance, installation, commissioning, operation and maintenance - Remote Water Treatment Services have been assisting Ausco Modular for many years in providing hardware and turnkey solutions for our clients.

I would strongly endorse RWTS for any project requiring specialized knowledge of water and wastewater management. They have consistently demonstrated expertise, capability, and reliability on all projects that we have partnered.

Regards,
Ausco Modular
