

“At DB Building, we’ve worked with a wide variety of waste treatment solutions over the years, and RWTS (Remote Waste Treatment Systems) continues to set the benchmark for reliability and performance. RWTS systems go beyond the basics of compliance—they make ongoing management straightforward for our clients and consistently deliver high effluent quality, even in some of the most challenging remote locations.

With the RWTS Ecofarmer, DB Building can deliver water management systems on our remote accommodation projects as a truly full turnkey solution. The Ecofarmer’s thoughtful design gives us the flexibility to meet every compliance requirement, whether for a new build or an upgrade, while streamlining installation and ongoing operation.

RWTS systems are designed for robust performance and adaptability. The straightforward maintenance means less downtime and fewer headaches for our clients in the field. Combined with our proactive service approach—anticipating and addressing challenges before they arise, customising solutions for each site, and providing clear, ongoing support—the RWTS Ecofarmer enables us to deliver water treatment systems that work, long term.

Our clients often mention the confidence they feel having a single team that manages every part of the process, from planning to compliance to aftercare. With RWTS Ecofarmer, DB Building can provide a complete, compliant solution for remote accommodation—no matter where the project is located.”
